ECTA releases latest best practice guide for chemical industry

The European Chemical Transport Association (ECTA) just published two new best practice guidelines for the European chemical logistics industry.

ECTA work groups have been focussing on two specific fields – transport order data standards within bulk chemicals and equipment master data.

“The objective of this guideline on transport order data standards is to give guidance how to facilitate electronic data exchange in bulk logistics,” said Peter Devos, ECTA managing director and work group speaker.

Electronic data exchange across companies has become more important in order to improve productivity and implementation time through standardising the data formats between supply chain actors.

“The importance to bring chemical logistics to the next level in terms of safety, quality and sustainability, the digital exchange of standardised and structured logistics equipment master data is gaining,” added Devos.

With the focus on future prognoses that data exchanges at loading and unloading places will be done digitally, ECTA created a structured and standard equipment data framework.

This results benefits for both, customers and suppliers to better address the more complex business needs and equipment requirements, ECTA concluded.

Crying over spilled milk

Businesses operating within the food industry, especially when transporting and handling food on a commercial scale, must ensure that they understand the risks and dangers that can occur if something goes wrong, and put steps in place to take all necessary precautions to avoid an incident occurring. When food substances are unwantedly exposed to the environment, whether... [\[Read More\]](#)

Depotrans Brazil joins EFTCO

The European Federation of Tank Cleaning Organisations (EFTCO) has announced the successful global membership application of Depotrans Brazil as its latest member. The company is EFTCO's second global member. DEPOTRANS has proven its quality approach to tank cleaning with the quality audit SASSMAQ - a comparable audit system to SQAS in South America. This was completed... [\[Read More\]](#)

Where tank cleaning and food safety intersect

Cleaning stations can ensure that they meet hygiene requirements for food and feed transport containers by signing up to the ENFIT High Quality Food (HQF) standard. This standard applies to cleaning stations where containers hold raw material and food and feed. The globally-recognised certification proves that the products have been thoroughly cleaned during each part... [\[Read More\]](#)
