Senior Partner Manager, Transporeon
Board Member, European Freight & Logistics Leader's Forum
Vice Chair, ALICE Group on "Global Supply Network Coordination & Collaboration"
European Commission Expert Evaluator

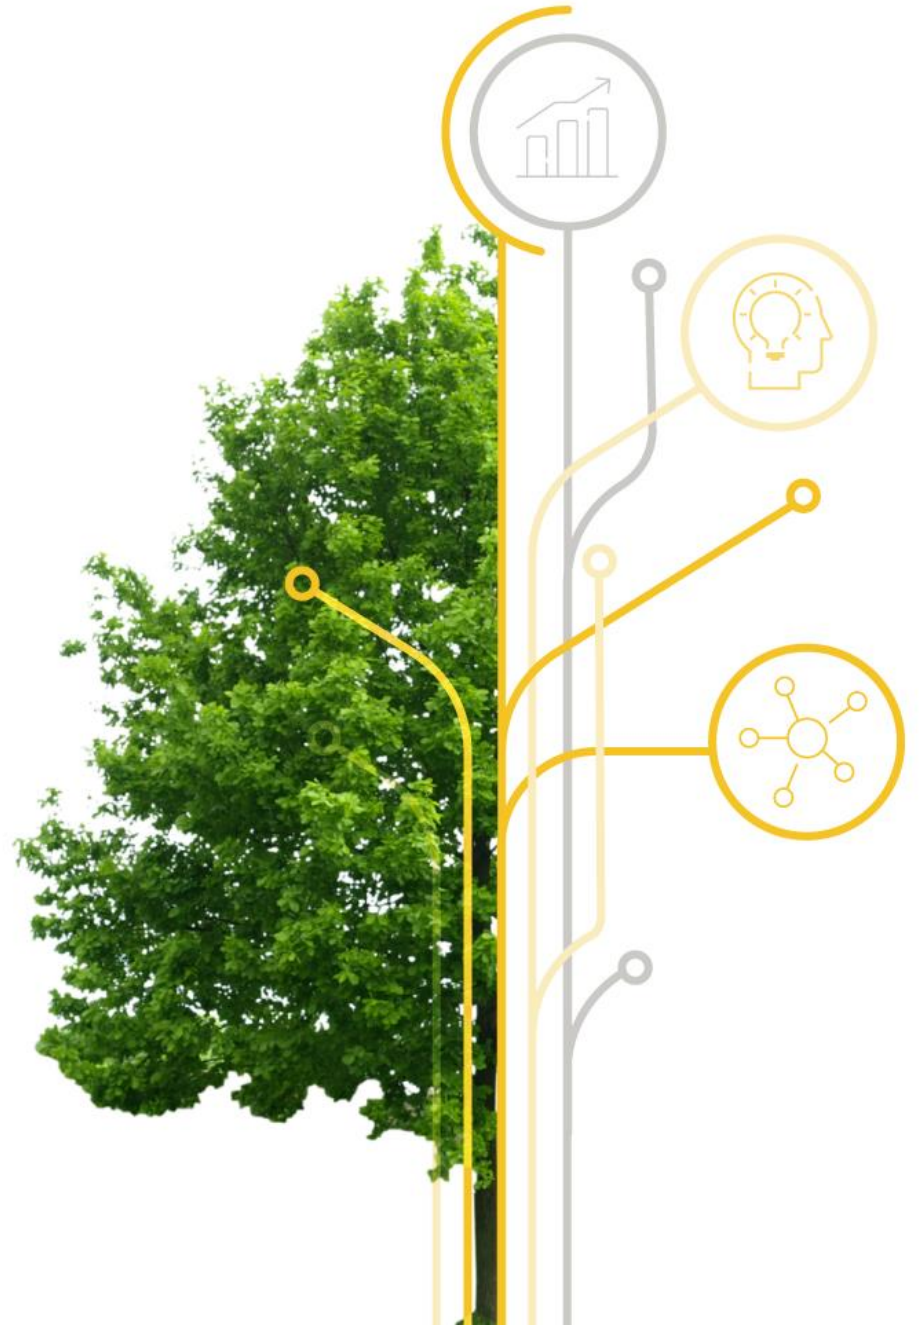

Calculation 4 Reporting

What are we aiming at?

- Report corporate scope 1 + 3 emissions
- Low effort
- High accuracy on the total (authorities, comparable)
- Low accuracy on transport level

What do we need, in my eyes?

- A GLEC or ISO 14083 (2022) compliant tool (accredited)
- Granular industry default average data
- Bottom-up calculation for transparency

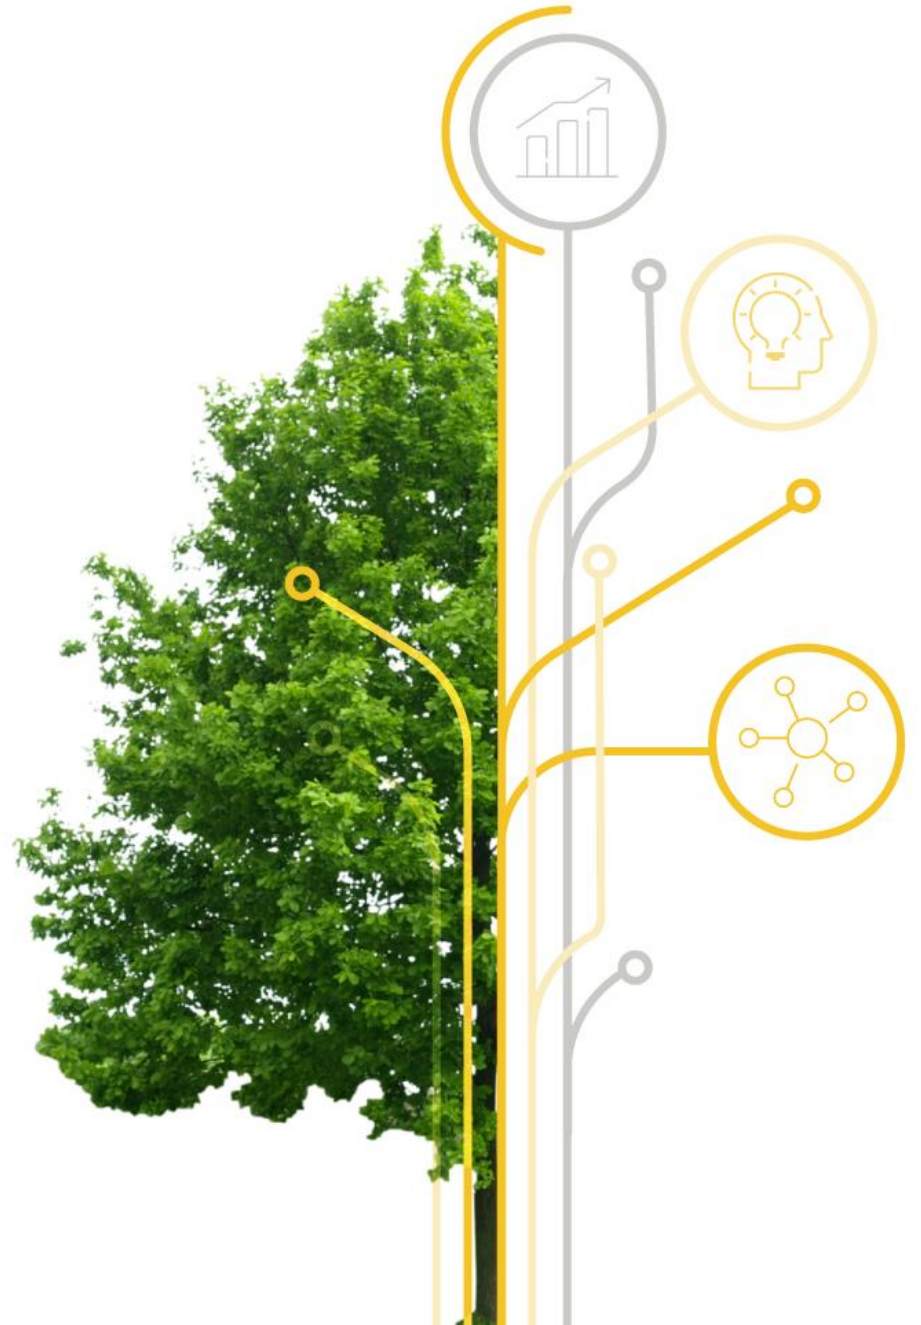

Calculation 4 Reduction

What are we aiming at?

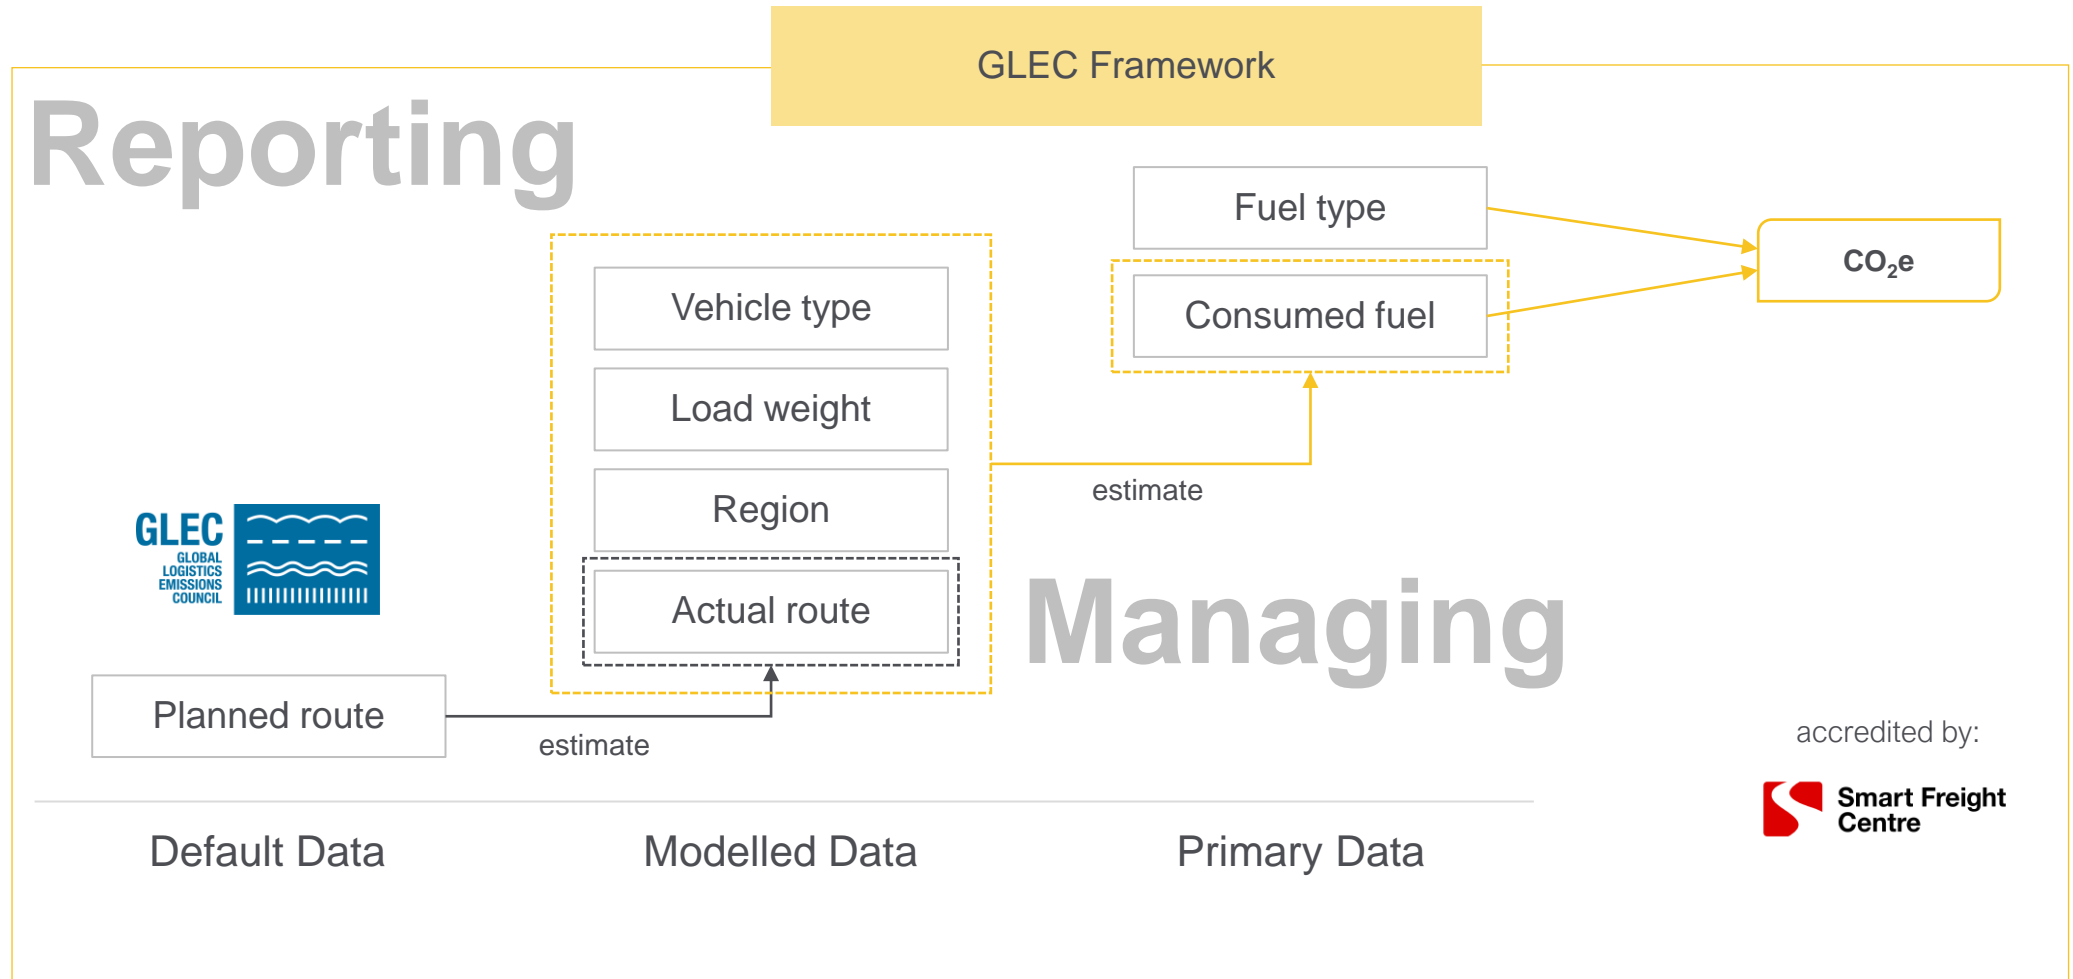

- Moderate effort
- High accuracy on transport level (consolidation)
- Make the differences visible

What do we need, in my eyes?

- Primary data (energy type, energy consumption, empty mile identification) from neutral sources
- For carriers: Also secondary data (driver behaviour, engine information, etc.)

Calculation Methods according to GLEC

TRANSPOREON

Thank you!
