“ZERO EMISSION: DETAILS OF HYDROGEN USE IN HEAVY GOODS VEHICLES”

24.10.2023 09:30-10:30

Hosts:

Adriaan van Hoeken - Lhyfe.com
Luc Haesaerts - Haesaerts Intermodal
Evert de Jong - ECTA

ECTA, the European Chemical Transport Association, is responding to the growing interest in the potential offered by hydrogen as a fuel for heavy goods vehicles with a webinar, taking place on 24 October, to look at the topic. The one-hour event, which starts at 09.30 CET, will feature presentations by Adriaan van Hoeken of Lhyfe.com and Luc Haesaerts of Haesaerts Intermodal moderated by ECTA's Responsible Care director Evert de Jong. The webinar will look at the technology behind using hydrogen in truck engines and the implications of ISO 14083, which details how to quantify greenhouse gas emissions.
